How to select hinge quantity & Change hinge positions on a cabinet

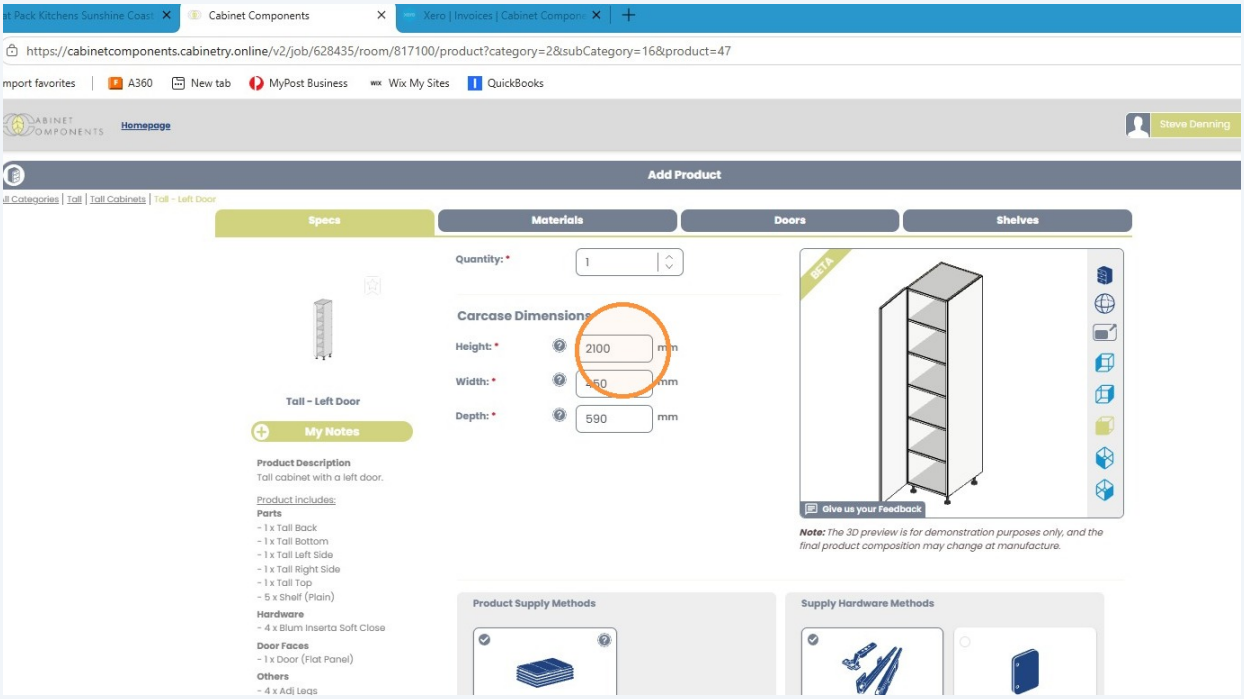

Learn the process for inputting specific cabinet dimensions and component details into your inventory system. This guide ensures you correctly define product variations and save your specifications for streamlined ordering and production.

Product Setup

1 Click Add Product.

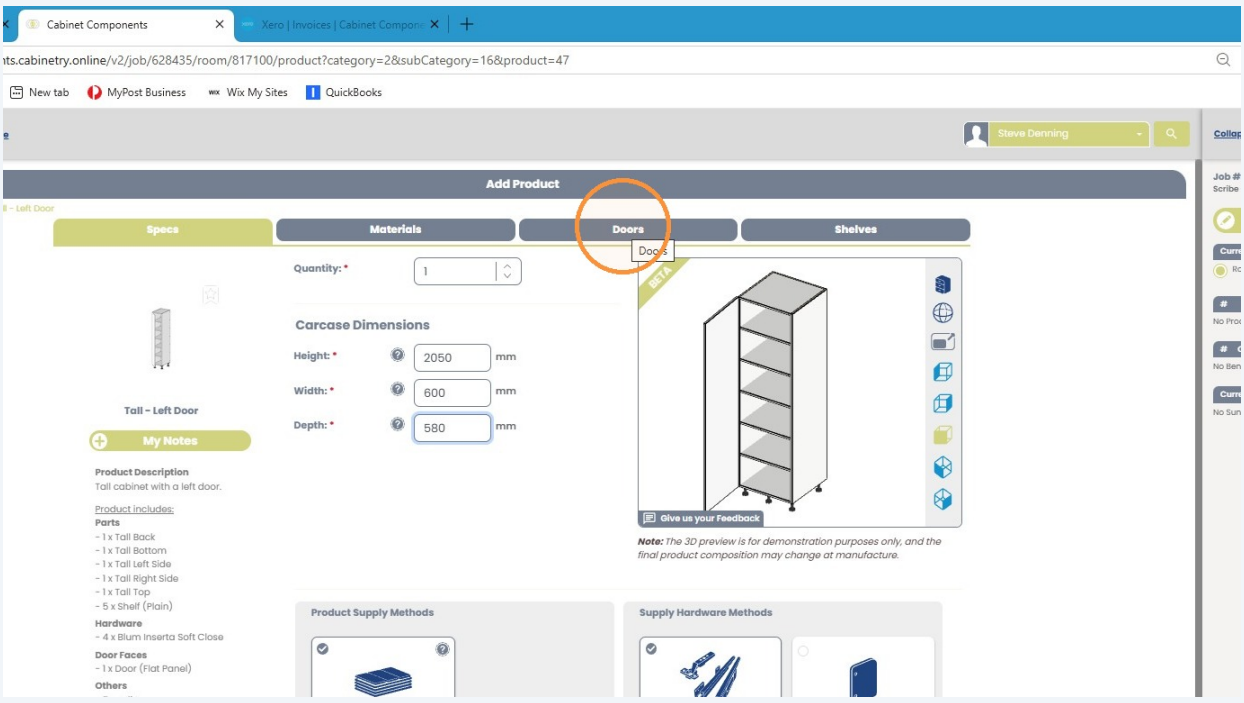

2 Enter the cabinet dimensions.

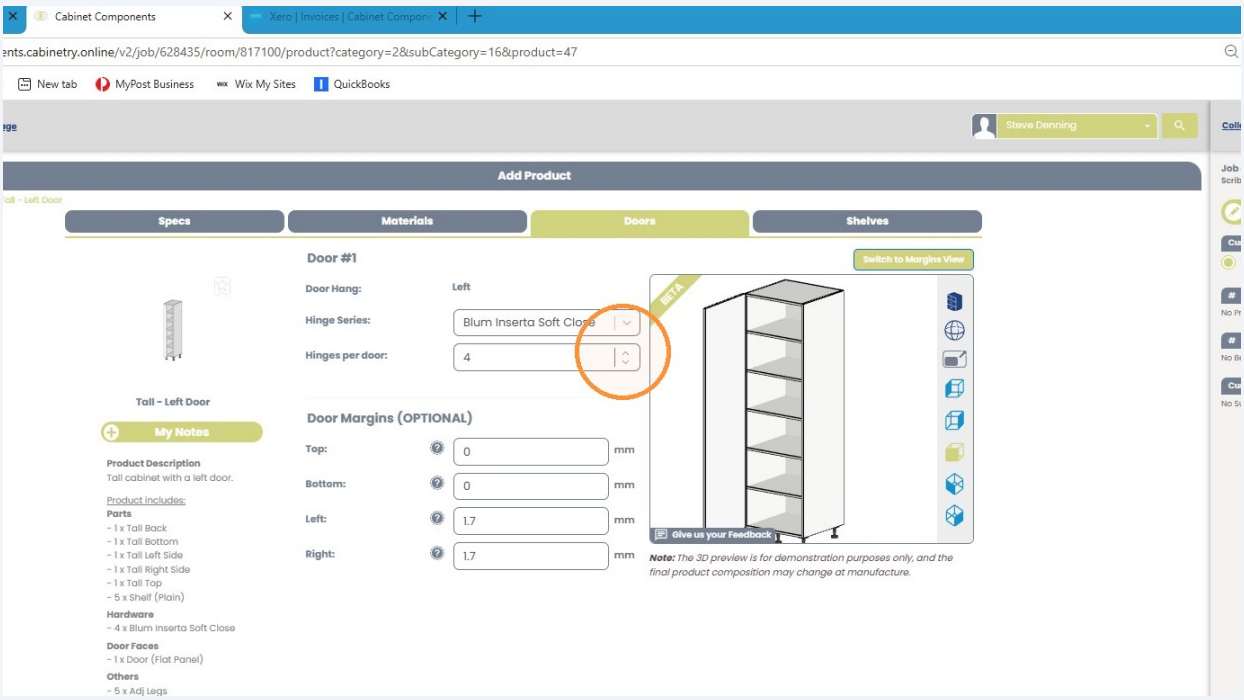

Door Configuration

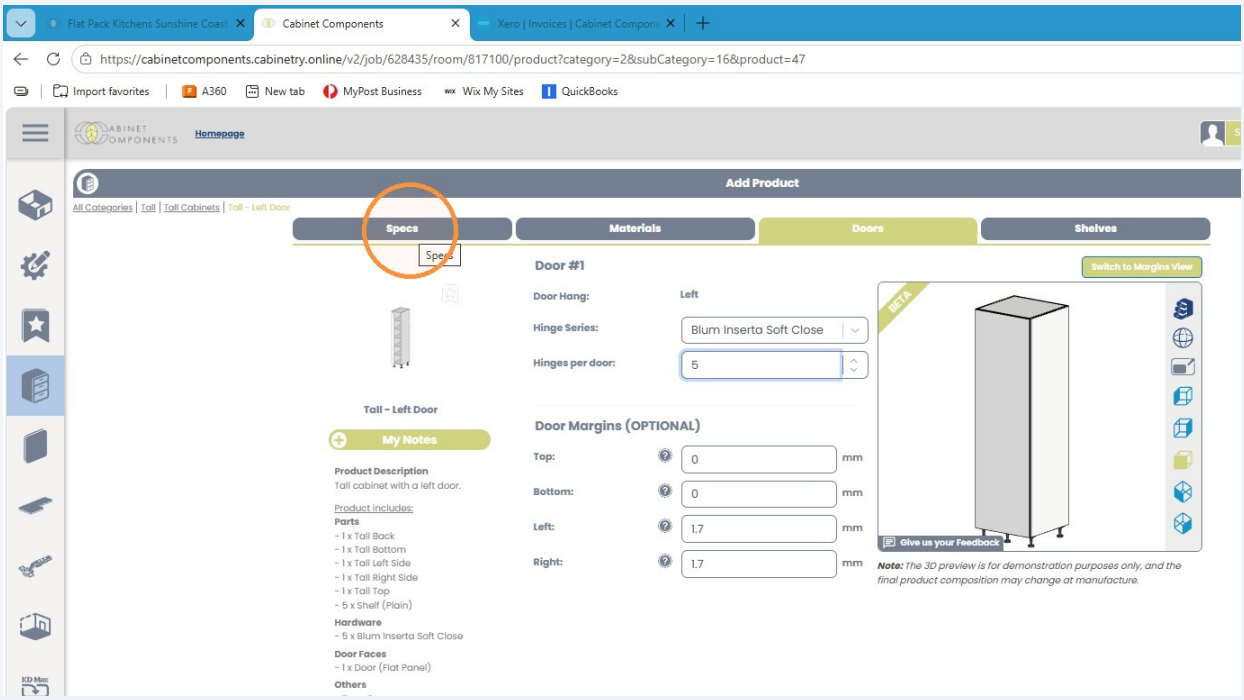

3 Click "Doors"

4 Select the quantity of hinges you require per door.

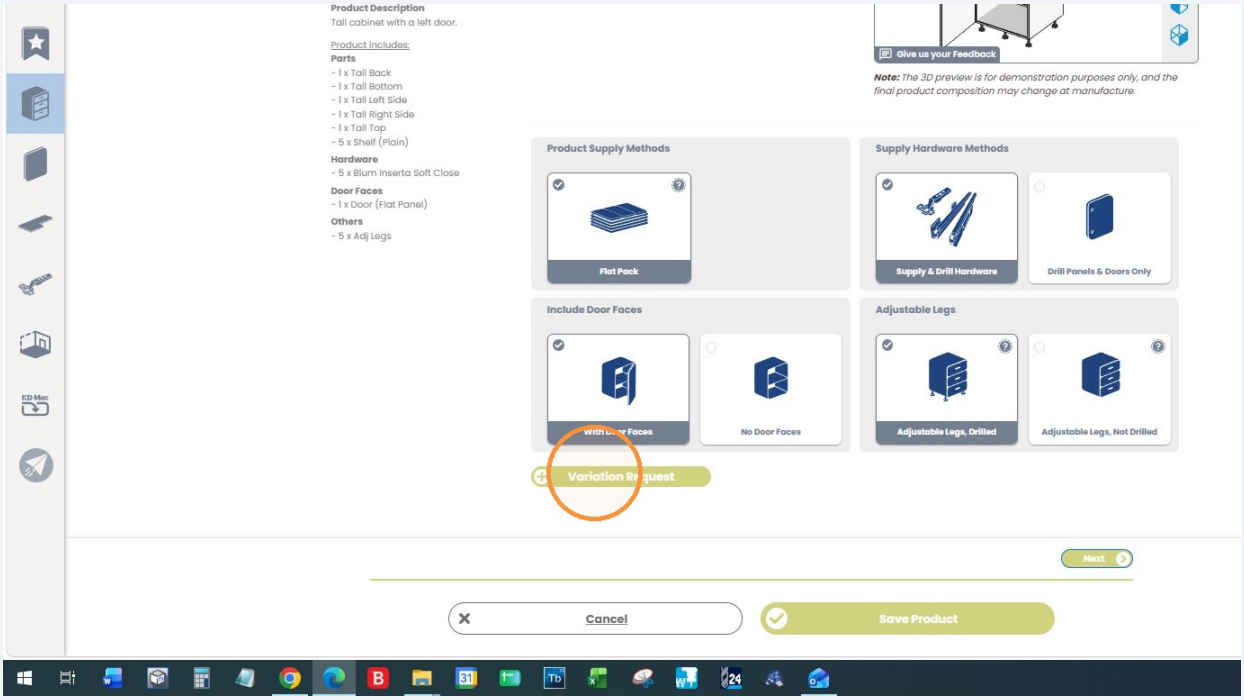

5 Click Specs.

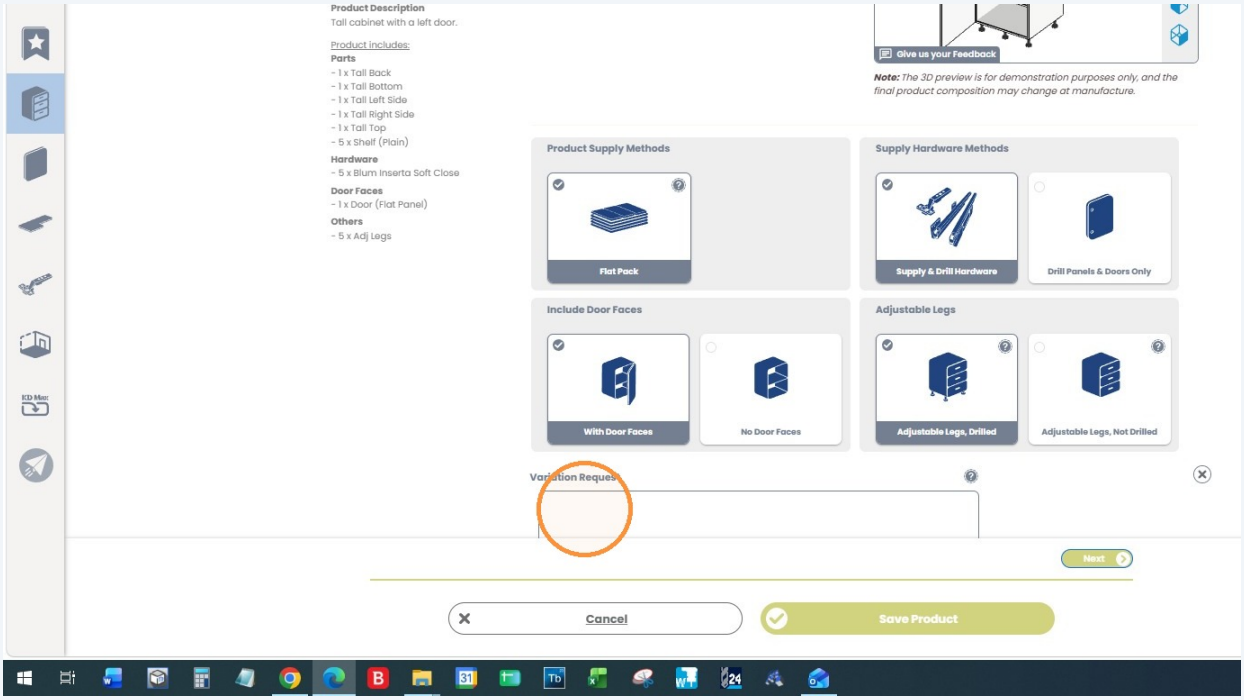

Variation Request

6 Click Add Variation Request.

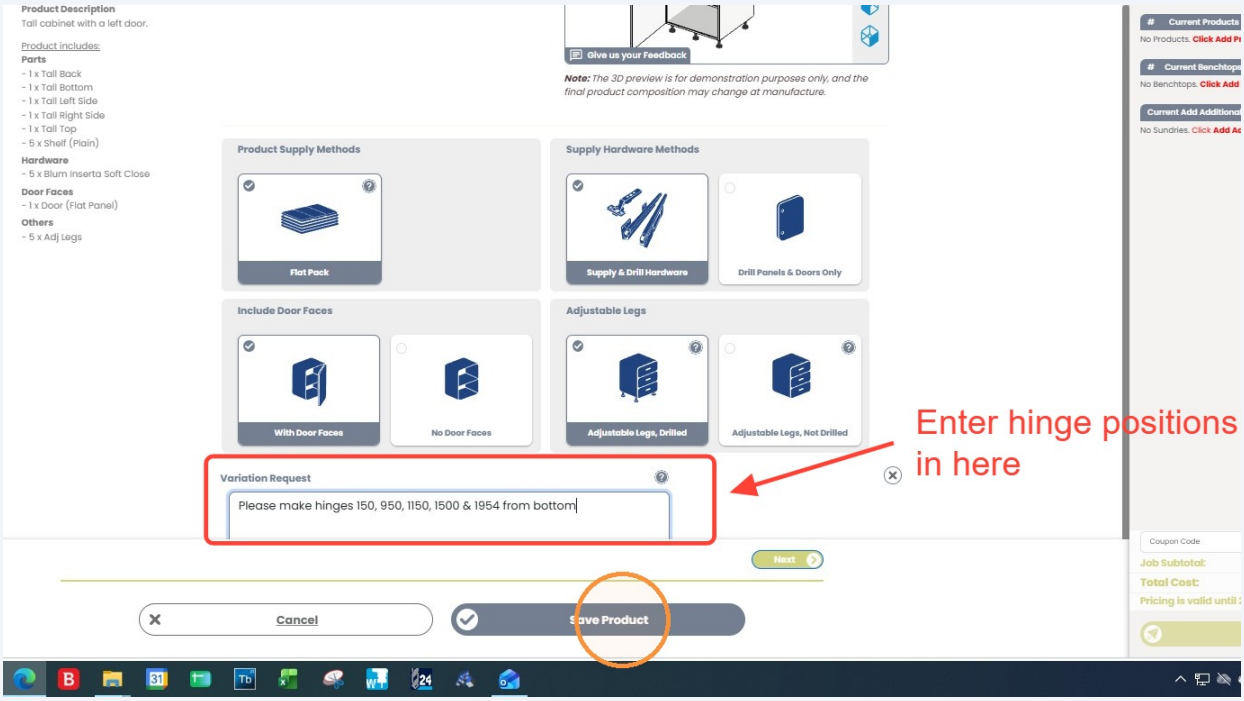

7 Enter the hinge positions you require if they are not all equal in the variation Request Tab.

Save Product

8 After you have entered the hinge positions click "Save Product".

9 Variation will come up as red text after cabinet has been saved.
